**Péter István Nagy** is the Head of the Department of Zoology and Animal Ecology and the leader of the major „Master in Ecotoxicology” at SZIU FAES. His current research activity focusses on the soil zoological assessment of environmental effects resulting from a wide range of human disturbances and climate change. Within this, his main field of interest is environmental nematology (the use of free-living nematodes as biological indicators). His research group performs field and laboratory tests mainly on soil nematodes and microarthropods. Furthermore, they carry out research in some fields of plant nematology.
