

Péter PEPÓ

(Hungary)

E-mail: pepopeter@agr.unideb.hu

Peter Pepó graduated MSc degree in Agricultural University of Debrecen. After 2-year practical farming work he joined the University of Debrecen. He had PhD (1992) and DSc (2004) degree from Hungarian Academy of Sciences in crop sciences. He is full professor and head of Department of Crop Production. His most important research fields are improving biological, agronomical efficiency and sustainability of cereals and oil crops production, impacts of biological and agrotechnical factors on crop quality. He has supervised over 15 PhD projects and he has more than 300 scientific papers. His current research projects seek to improve the understanding the use-efficiencies and sustainability of agronomic crop models in cereal and oil crop production and facilitate the development of production elements and genotypes that can mitigate and adapt to climate change. He is the member of ASA (American Society of America) and CSSA (Crop Science Society of America). He was the coordinator in several international projects for high education and scientific research. The period of 2012-2014 years he is the president of ESA (European Society for Agronomy).
